

For the final project, your team will use SRE principles to identify and implement specific improvements to the site to improve the application's value to the customer.

You must receive a grade of at least 70% to receive completion credit for this assessment.

As a team, you will present your work to the instructors and other teams. The presentation should include the following topics:

- How the team decreased toil by quantifying the impact of changes made to address toil.
- Give examples of how the team applied the concept of simplicity to streamline the application.
- Propose changes you would make if you had the time and opportunity to continue working on the project.

Presentation Expectations

The presentation should be organized and formatted professionally, and we encourage the use of presentation software such as PowerPoint or Google Slides.

- The total presentation should be 15–20 minutes long.
 - Use presentation software such as PowerPoint, Google Slides, or Prezi to format and organize the content.
 - Check for typos and other errors.
 - Focus on content over styling.
- The presentation should provide an overall view of the completed project, as well as specific examples of how the project meets SRE principles.
 - Refer to the training material and your backlog/toil list while preparing the presentation.
 - Present the team.
 - Explain the problem statement(s).
 - Outline briefly the achievements that will be presented.
- Each team member should be prepared to discuss their individual contributions and achievements on camera.
 - Present yourself and your role.
 - Share your work and explain how it relates to SRE. Specifically, which principles does your work relate to?
 - Demonstrate your biggest achievement, such as a significant incident you managed, a script you developed, or a policy you wrote.
- The presentation should conclude with improvements that the team would suggest in future sprints.
- Be prepared to answer questions from the audience at the end of the presentation.

The presentation should not explain the project in detail. Instead, highlight the key features and achievements, with the goal of demonstrating your understanding of how and why to apply SRE principles to improve the application's value.

Each member of the team is expected to contribute to the final presentation, including especially highlighting their specific contributions to the project, explaining how those contributions map to SRE principles discussed in the course, and demonstrating their biggest achievement.

Grading Rubric

The following rubric will be used to grade the presentation. Note that some criteria are team-based while others are based on the individual team member's contribution, so each team member may receive a different grade for the same presentation.

A grade of 70% is required to receive completion credit for the project. **Failure to participate in the team presentation will result in a grade of 0 for the project.**

Criteria	Exemplary	Proficient	Developing	Misaligned
TEAM - Quantify the impact of the technical improvements the team chose to make to the site, demonstrating their benefits to the client. (SLO/SLI)	20	15	10	0
			Feedback	

Criteria	Exemplary	Proficient	Developing	Mis
TEAM - Explain the major components of the site that are critical for reliability and any SRE principles those components align with.	15	11	7	0
TEAM - Provide a final consultation on the next steps for the site with your recommendations going forward.	10	8	5	0
TEAM - Format and organize a presentation professionally.	10	8	5	0
TEAM - Demonstrate time management in a presentation.	5	3	2	0
INDIVIDUAL - Demonstrate individual contributions to the presentation.	15	11	7	0
INDIVIDUAL - Link your work with SRE principles.	15	11	7	0
INDIVIDUAL - Demonstrate presentation skills.	10	8	5	0
